Author: Cath Yu

J.K., diagnosed with rheumatoid arthritis of 2 years was referred to your clinic. She constantly complains of joint pains in spite of good compliance to medications. Her attending rheumatologist is requesting for an infectious disease clearance to start infliximab. What would be your next step?

Please choose only one answer:

- Give the clearance; infliximab does not increase the risk for any infection
- Grant the clearance once a baseline chest radiograph is devoid of infiltrates
- Will do both IGRA test and chest radiograph; if both are positive, will initiate anti-TB treatment and advise against infliximab
- Will do both IGRA test and chest radiograph; if only the IGRA test is positive, will advise to complete isoniazid prophylaxis before starting infliximab

4.1.9. A 45 year-old male came to you for consult due to a 3-week history ...

Author: Cath Yu

A 45 year-old male came to you for consult due to a 3-week history of cough and progressive weight loss. Work-up revealed tuberculosis. He mentioned that he was also diagnosed with cirrhosis after consulting with his gastroenterologist a week ago and that all tests were normal. In starting anti-TB meds, which will you avoid?

Please choose only one answer:

- None. I will start the usual 4-drug regimen
- I will have to avoid at least 2 of the most hepatotoxic drugs
- I will not start a regimen with any hepatotoxic drug as he remains at risk for drug-induced liver injury
- I will avoid pyrazinamide as this is the most hepatotoxic among the anti-TB drugs
