4. Chapter: Psychology MCQ 2009 2 Exam

1. Psychology MCQ 2009 2 Exam Questions

4.1.1. Difficult and controversial court cases occur if an accusation is b...

Author: John Gabrieli

Difficult and controversial court cases occur if an accusation is based on alleged memories for remote events when that memory has been repressed for many years and recovered during therapy. What memory phenomenon is most threatening to the accuracy of these sorts of memories?

Please choose only one answer:

- Encoding specificity
- Proactive interference
- Retroactive interference
- Flashbulb memories

Check the answer of this question online at QuizOver.com:

4.1.2. In an experiment aimed to study short-term memory, subjects were as...

Author: John Gabrieli

In an experiment aimed to study short-term memory, subjects were asked to remember three-letter consonant trigrams (LCK) during retention intervals, during which they counted aloud, ranging from 0 to 18 seconds. On average, recall for the trigrams was virtually absent after 18 seconds. Subsequent studies revealed that the poor memory at 18 seconds was primarily due to

Please choose only one answer:

- Limited capacity of short-term memory
- Serial position effect
- Retroactive interference in long-term memory
- Proactive interference in long-term memory

Author: John Gabrieli

The field has once considered babies before age 12 months as pre-linguistic)

Current evidence suggests:

Please choose only one answer:

- Even though they don't speak yet, infants can fully understand language before 12 months.
- Key universal linguistic milestones occur before 12 months.
- Most infants can talk before 12 months.
- Babies are indeed pre-linguistic before 12 months.

Author: John Gabrieli

You look up for the telephone number for a Chinese restaurant to make a delivery

call, repeatedly read the number out loud, and dialed the number. Next morning you

have no idea what the number was. Choose the answer that is NOT true about the

memory involved in this phenomenon.

Please choose only one answer:

- This example represents the limitation of long-term memory capacity.
- The number was briefly maintained in your short-term memory but didn't make it into your long-term memory.
- While repeatedly saying it out loud, it was maintained in your working memory through visuospatial sketchpaD)
- You failed to remember the number because the information was not transferred to short-term memory from sensory memory.

Author: John Gabrieli

A friend of yours has never taken a psychology course before. You show her four cards labeled P, 7, E, 4, and ask her which cards need to be turned over to verify the rule "If there is a consonant on the front, then there is an odd number on the back." The correct answer is to turn over the cards labeled "P" and "4", but your friend foolishly turns over cards labeled "P" and "7". You reassure her that most people make this mistake, which is known as (a/an):

Please choose only one answer:

- Schema
- Functional fixedness
- Availability heuristic
- Confirmation bias
