1. Unit 02: The Composition of a Spreadsheet Questions

4.1.1. Name three types of formulas that can be used in Microsoft Excel.

Author: Ryan Lowe

Name three types of formulas that can be used in Microsoft Excel.

Please choose only one answer:

- Totals, averages, and percentages
- Averages, percentages, and recipes
- Sums, averages, and decimals
- Fractions, metrics, and averages

4.1.2. Where can formulas be viewed in a Microsoft Excel spreadsheet?

Author: Ryan Lowe

Where can formulas be viewed in a Microsoft Excel spreadsheet?

Please choose only one answer:

- Formulas are not viewable because this option would violate copyright laws.
- Formulas always show up when you hover over the title of a heading.
- A formula may be viewed by selecting a cell, then looking at the formula bar at the top of the spreadsheet; if a formula has been inserted, it will now appear in the formula bar.
- Viewing formulas is not possible in Microsoft Excel.

4.1.3. How would you calculate the number of rows and columns you would ne...

Author: Ryan Lowe

How would you calculate the number of rows and columns you would need in order to start building a Microsoft Excel spreadsheet for a specific purpose?

Please choose only one answer:

- You wouldn't need to calculate this figure, because the parameter required for any spreadsheet is always 100 rows by 100 columns.
- You would decide how many rows and columns you would need for a specific purpose, and then you would add one row and one column to this figure so that your rows and columns would have headings.
- You would pick numbers at random, since the numbers of rows and columns in a spreadsheet doesn't really matter.
- You would always start with 50 rows and 50 columns, since any other number won't allow for an input.
